Summary

Product Manager with 6.5+ years of experience building and scaling technology-led businesses across fintech, telematics, health-tech, IoT, and data. Proven track record of driving revenue growth, improving customer retention, and delivering operational efficiencies at scale. Combines strong product judgment, data-driven decision-making, business acumen, and customer insight to align cross-functional teams, influence senior stakeholders, and solve complex problems to deliver measurable business outcomes.

Professional Experience

Senior Product Manager | Wheelseye | Gurgaon, India *Feb 2022 – Jul 2025*

- Owned the FasTag roadmap and metrics end to end (₹3,600 Cr annual transaction volume, ₹36 Cr ARR, 1.5M active vehicles), leading a 12-person cross-functional pod across engineering, QA, design and analytics and taking product decisions to CFO and Founder sign-off.
- Spearheaded a 0→1 postpaid FasTag credit product from discovery to launch: validated demand across 2,000 call transcripts, aligned tech, design, legal, CFO, Founder and IDFC First Bank, launched in 60 days; reached ₹2.5 Cr ARR by month 3 at ~0.3% NPA.
- Built a toll anomaly-detection and dispute-automation system that scores each FasTag deduction against a national database of per-plaza, per-vehicle-class prices and auto-creates and tracks dispute tickets. Cut toll-dispute calls by 34% reimbursement TAT from 45 to 3 days through a Quick Dispute Resolution partnership with bank; further priced it at ₹250/truck/year for a new ~₹50L/year revenue line.
- Rebuilt the KYC onboarding funnel through session replay, live error dashboard, dedicated sales helpline and in app guidance increasing sales-to-activation funnel from 40% to 87%, monthly new acquisition up by 27% and helpline calls went down 70% in the first quarter,
- Optimised horizontal payments module across 250K daily transaction volume (₹12 Cr/day, 10 verticals, 4 platforms): success rate 72% to 87%, intent-to-payment time 54s to 27s, uptime 94.3% to 99.2%, built SR-based dynamic routing, automated UPI redirection during bank API downtime reducing bank based recharge failures by ~40% and successfully negotiated SLA terms with Razorpay and PayTm.
- Built BBPS-based in-app recharge on NPCI rails with SETU, bringing back recharges that were leaking to external channels creating additional ₹560 Cr annual transaction volume, ₹1 Cr annual revenue and a 7% cross-sell lift between telematics and Fastag services.
- Co-ran regulated KYC document verification at 1.5M-vehicle scale with the operations lead, using OCR batch extraction for Aadhaar and PAN, correction-set workflows and a manual-verification queue routed by extraction confidence, reducing min-KYC drop offs by 80%.
- Moved the vertical's decisions to an observed rather than reported basis with UXCam session replay, onboarding and payment error dashboards and A/B tests across installation, recharge and payment-mode flows using tools like Firebase, Mixpanel and Metabase.
- Cut monthly FasTag complaints from ~7K to ~3K through a multi-workstream retention with auto-ticketing, redesigning toll transaction page, tag-replacement tracking and building auto recharge flows, improving NPS by 18 points and retention by ~2%.
- Built the business case for an off-roadmap vernacular engine across 8 Indian languages, won Group PM approval and shipped it, lifting penetration in non-Hindi, non-English regions by ~10%.

Product Manager | PCL Health London | Noida, India *Aug 2021 – Jan 2022*

- Designed and ran remote-care pilots across 10 NHS-affiliated hospitals in a 3-month window, defining success metrics and coordinating engineering, data and operations with clinical and IT stakeholders; converted one hospital to a paid contract.
- Built an OCR-based health device reader using Google Vision that captures readings from the device display into structured health data, removing per-device Bluetooth SDK integration and enabling instant onboarding of health devices.
- Introduced agile scrum from scratch across an India–UK team reducing delivery cycle times by 35% and redesigned onboarding flows for patients and care teams, reducing activation time by 40%.

Associate Product Manager, Operations | Wheelseye | Gurgaon, India *Apr 2020 – Aug 2021*

- Built a geo-based auto-allocation engine, matching orders to the nearest available installer by real-time location and workload, increasing daily order hit rate by 27% and reducing cost per order by 22% across 2,800 daily orders.
- Improved right-first-time installations by 23%, cut relay-induced escalations 40% and reduced customer churn by 22% over 6 months, using Python notebooks to link installation method to failure rate and shipping an A/B-tested in-app wire-check flow.
- Cut ₹8L/month in network spend by optimising SIM routing and activation. Cut ₹20L/month in device pilferage by building an inventory system tracking 60,000 GPS units per month across 1200 installers.

Data Analyst, Banks & Channel Partnerships | Wheelseye | Gurgaon, India *Apr 2019 – Apr 2020*

- Built the risk analytics POC that onboarded Tata Motors Finance and ICICI Bank as leading partners, analysing FasTag cost structures and utilisation patterns across 150K GPS-tracked vehicles and presenting findings directly to partner teams; both partners acted on the analysis.
- Engineered an asset behavioral feature set with round-trip frequency, 60-day rolling utilisation windows, city-level routes that lenders used as risk inputs for an asset class with no reliable credit history, backed by trend dashboards and automated month-wise reporting pipelines.
- Developed VAHAN national vehicle registry pipeline for vehicles using a web scraper plus Pandas cleaning pipelines, normalising make and model variants into canonical records; the design became the template for external data work across the analytics function.

IoT Engineer, IoT & Labs | Wheelseye | Gurgaon, India *Nov 2018 – Apr 2019*

- Built and deployed a 27-feature logistic regression model predicting GPS 'No-Info Zone' exit within 1 km of movement at 96.7% held-out accuracy across a 200K-truck fleet, using Python and SQL on production MongoDB and PostgreSQL.
- Retained a 1,200-truck client (~₹21.6L annual contract value) in 3 days: replicated a signal-loss fault in a controlled experiment, traced it to low Airtel and Vodafone coverage and coordinated a fleet-wide SIM swap to BSNL.

Education

- B.Tech, Electronics & Communication Engineering – Vellore Institute of Technology, Vellore *2014–2018*

Certifications

- Advanced Certification in Data and Decision Science | IIT Delhi *2024–2025*
- Lean Six Sigma Green Belt | KPMG
- Competent Leader & Advanced Communicator | Toastmasters International
- Tabla Diploma (3-year) | Prayag Sangeet Samiti
